

## PhD position in chromatin remodeling and cancer cell invasion

AG Grosse, University Marburg

We seek for a motivated PhD student at the Institute of Pharmacology, Medical Faculty, University of Marburg. Research focus is on molecular mechanisms that control tumor cell invasion. Aim of the project is to gain insights into the molecular actions of the novel transcriptional regulator SCAI (see also Brandt et al., 2009). The project will involve standard molecular biological techniques as well as chromatin remodeling- and cell motility –assays. For consideration, please contact [dominique.brandt@staff.uni-marburg.de](mailto:dominique.brandt@staff.uni-marburg.de) with a short curriculum vitae and name/contact information of references.
